## Medium Format RGB Camera

---

The Phase One P5 is the revolutionary flagship 128MP Medium Format camera that transcends its role as a mere camera - it's a survey-grade instrument set to redefine the way you capture.

Achieve exceptional results, down to 0.3/0.8 cm RMS XY/Z\* absolute accuracy, making your data impeccably trustworthy. When paired with the Trinity Pro, the P5 swiftly covers large areas with survey-grade precision, significantly reducing time and costs compared to

*\*Using high precision PPK and accurate ground control points.*

conventional methods. The electronic global shutter, combined with metrically calibrated lens and sensor, reduces the necessity for extensive software corrections caused by pixel distortion, ensuring the preservation of high-quality data.

## RGB Camera

---

The SONY ILX-LR1 camera, with its cutting-edge high-accuracy capabilities and expansive coverage, seamlessly integrates into Quantum Systems drones and allows direct camera control, while delivering exceptional image quality.

The camera harnesses advanced sensor technology and processing power, resulting in a compact and light-weight solution that elevates project efficiency. Additionally, users have the flexibility to customize settings to

suit any mission, reducing data load and streamlining workflows, while maintaining image quality. This makes it an ideal choice for commercial mapping missions.

SONY RX1 R II

# Sony RX1 RII

## RGB Camera

---

The Sony RX1 RII meets the highest demands for RGB image quality and resolution in everyday surveying and monitoring applications, especially in the mining, civil survey, and agricultural sector.

With its resolution of 42.4 megapixels, the Sony RX1 RII is ideal for all applications where the highest requirements are placed on the images. The output possibilities vary from precise data sets like digital ortho photos

(DOP), digital terrain models (DTM), digital surface models (DSM), high-resolution point clouds and detailed 3D models.

# Qube 640

## LiDAR Scanner

---

The Qube 640 is a LiDAR sensor with a 176° FOV, integrated colorization through an 8MP camera, enhanced vegetation penetration and vertical scanning.

The Qube 640 is co-developed with YellowScan for Trinity Pro and Tactical drones. It features a selectable FOV (field of view) of up to 176°. Combined with Trinity's capabilities, it enables 32 km corridor scanning with one single flight. At 120° FOV, it improves productivity by 50% compared to its predecessor, the Qube 240.

The sensor ensures improved vegetation penetration, detailing foliage and trunks, and facilitates vertical scanning applications with reduced outer edge mismatches, thanks to the new IMU. An integrated 8MP RGB camera enables LiDAR capture and colorization in the same flight.

## LiDAR Scanner

---

The Qube 240 is a geomatics grade LiDAR scanner providing essential information by generating an accurate point cloud of the processed environment through 240,000 distance measurements per second.

The Qube 240 produces images with an unmatched level of accuracy that is achieved with the help of the integrated Applanix APX15 INS. It generates precise, three-dimensional information using the shape of the earth and its surface characteristics. This information can then be used in appli-

cations, such as calculating stock volumes in mines, inspecting power lines, gathering elevation models of ground under dense vegetation, or for calculating biomass feedstocks. LiDAR technology can also be used for mapping infrastructure and for surveying large areas, even at night.

OBLIQUE D2M

# Oblique D2M

## Five-lens RGB Camera

---

The Oblique D2M is a powerful oblique imaging system consisting of five high-resolution multidirectional cameras, making it the ideal tool for large scale 3D photogrammetry.

A fast trigger interval along with custom high-speed storage provides class-leading time efficiency without compromising data quality. The payload combines four oblique and one NADIR camera to capture complex

geometries with ease. This ensures remarkable detail even on slanted surfaces and makes Oblique D2M destined for 3D mesh generation of high-rise areas, industrial environments, archaeological sites and alike.

## RGB, Multispectral and Thermal Camera

---

The Altum-PT is the best-in-class multispectral camera with synchronized thermal images ideal for production agriculture, phenotyping, and environmental monitoring.

The MicaSense Altum-PT captures synchronized multispectral, thermal, and panchromatic data for pixel-aligned outputs at high resolutions for advanced vegetation research

applications. This includes plant health monitoring from early emergence on, with thermal data for water stress and irrigation system monitoring.
